**MASSACHUSETTS DEPARTMENT OF CONSERVATION AND RECREATION TO
PROVIDE BOAT RAMP MONITORS TO HELP STOP THE SPREAD OF INVASIVE
WEEDS**

The Massachusetts Department of Conservation and Recreation (DCR) has hired six seasonal boat ramp monitors to check incoming and outgoing boats for aquatic invasive species (AIS) at key locations across the state. This summer, starting Memorial Day weekend one of these monitors will spend a portion of their time at the Long Pond boat ramp in Freetown.

The state of aquatic invasive plant species in Massachusetts was outlined in a recent report to the legislature commissioned by Representative Stephen Canessa. The report described current resources to address AIS, management options, costs, future risks, and recommendations.

Many of Massachusetts lakes, including Long Pond in Lakeville and Freetown, are infested with aquatic invasive species such as Fanwort and Variable Milfoil (both in Long Pond), along with Eurasian Milfoil, Water Chestnut, Curly leaved pondweed and several other species. When these species enter a waterbody they can have a devastating impact on the lake's ecology, on recreation and waterfront property values. Since the local ecosystem did not develop natural controls, (animals or other plants that limit their growth) invasive species may spread rapidly.

Although Long Pond and many other lakes and ponds already are infested with several invasive aquatic plant species, it is critical to prevent the introduction of other AIS to Long Pond, and to stop the spread of AIS out of Long Pond. Studies have shown that the most effective way to prevent the spread of AIS by boats is to conduct a thorough visual survey and remove all plants and animals from the boat motor, trailer, anchors, fishing gear and dive gear and dispose of them on dry land away from the water.

"This is great news for the residents in Freetown and Lakeville who live on Long Pond, as well as for everyone who utilizes the pond for its recreational offerings," stated Rep. Canessa. "Protecting our natural bodies of water is critically important and we are confident that a boat ramp monitor on Long Pond will assist us greatly in minimizing the spread of Aquatic Invasive Species, particularly through education. I thank Commissioner Burrington and the entire staff at DCR for their continued support and assistance with this issue."

In addition to providing a voluntary visual inspection, boat ramp monitors will survey visitors to assess their awareness of AIS, and hand out educational brochures on AIS. Since 2003, DCR has placed seasonal ramp monitors at a limited number of public facilities across the state. Over the
